

Peter, the pumpkin eater, wanted to make two pies for a party. His mother, a professional pie maker, had a recipe for him to use. However, she always made 80 pies at a time. She used:

10 dozen eggs

27 litres of condensed milk

480 tablespoons of sugar

100 teaspoons of cinnamon

140 cups of pumpkin

Peter looked in the cupboard and found:

4 cups of pumpkin

2 eggs

1 $\frac{1}{2}$ teaspoons of cinnamon

$\frac{2}{3}$ of a litre of condensed milk

15 tablespoons of sugar

Did Peter have enough ingredients to make two pumpkin pies for the party or did he need to buy more?
